This clone is from an A. gambiae BAC library (ND-TAM) provided by
F.H. Collins and sequenced by The Institute for Genomic Research
(TIGR). The BAC library was generated from A. gambiae BEST strain
DNA. All DNA was extracted from newly hatched first instar larvae
to minimize the inclusion of DNA from microorganisms that inhabit
the gut. The DNA is derived from mixed sexes of larvae. The BAC
library was constructed at Texas A&W University BAC Center
University, College Station, Texas 17843-2123, USA using a Hindill
partial digest.
                                                                                                                                                                                                                                                                                                                                  1024
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      GSS 10-DEC-2001

                       melanogaster genome using these BACB. For further information please see http://www.fruitfly.org The BDGP brosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       1078 AGTAAAGCAGATCGTGTATTCTTATGTGAAATTTTTGGATCAATTAGAGAAAATACTGGC 1137

Determination of this BAC-end sequence was carried out as part of
collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila
melanogaster genome using these BACs. For further information
please see http://www.fruitfly.org The BDGP Drosophila
melanogaster BAC library was prepared by Kazutoyo Gosegawa and
Aaron Mammoser in Pieter de Jong's laboratory in the Department of
Cancer Genetics at the Roswell Park Cancer Institute in Buffalo,
NY. The library is named RRCI-98 and was constructed by patfial
ECORI digestion of Drosophila DNA provided by the BDGP from the
isogenic strain y2; cn bw sp, the same strain used for the BDGP's
pl and EST libraries. A more detailed description of the library
and how to order individual BAC clones, the entire library, or
filters for hybridization from the BACPAC Resource Center can be
found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        990 ATATCCACATAAAGAAGTTGTTGCAGTATTTCAACCACACACTTTCTAGAACACAGGC 1049

/note="Vector: pHOS1; Site 1: Bst I; Constructed at The Institute for Genomic Research (TIGR), Rockville, WD.
Genomic DNA isolated from broth cultures of E. histolytica using a method described by Clark and Diamond (Clark, C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a tight size distribution (-2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotque sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University Press, 1999)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô

Choi GH;

WPI; 2001-183259/18. N-PSDB; AAS00189 New isolated nucleic acid for use in diagnosing Staphylococcus infections and in vaccines for eliciting immune responses to the infections.

Claim 9; Page 14; 225pp; English.

The sequence represents S. aureus Murc (UDP-N-acetylmuramate:L-alanine ligase). The polynucleotides of the invention are used to detect Staphylococcus nucleic acids in a biological sample from an animal for diagnosing Staphylococcus infections. The polypeptides of the invention

27-MAR-2001; 2001GB-00007661

(CHIR-) CHIRON SPA

from an animal to diagnose Staphylococcus infections. The polypeptides are also used in vaccines to elicit protective antibodies in an animal to a member of the Staphylococcus genues and for preventing or attenuating an infection caused by a member of the Staphylococcus genus e.g wound infection, cellulitis, burn infection, eyelid infection, food poisoning, joint infection, meonatal conjunctivitis, osteowyellitis, bkin infection, escaled skin syndrome (also known as toxic epidermal necrosis, Ritter's disease and izyell's disease), toxic shock syndrome and endocarditis. The polymucleotides may also be used in vaccines and for preventing or attenuating a Staphylococcus infection. Antibodies to the polypeptides may be used to purify, detect and target the polypeptides in in vitro and in vivo diagnostic and therapeutic methods used to detect anti-Staphylococcus antibodies in a biological sample

240 187 The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of the novel S. aureus proteins of the invention New Staphylococcus aureus protein, useful as a vaccine for treating or preventing Staphylococcal infection, specifically an infection caused by S. aureus, e.g. sepsis. WPI; 2003-468119/44. N-PSDB; ADD15464. Novel crystallized recombinant polypeptides from Staphylococcus aureus, Streptococcus pneumoniae and Escherichia coli and which are involved in membrane biosynthesis, useful as targets for pathogenic bacteria.

Claim 20; SEQ ID NO 30; 325pp; English.

developing antimicrobial agents for use as surface disinfectants, personal hygiene applications and as food preservatives or in treating food products to eliminate potential pathogens. This polypeptide sequence is the Murc protein encoded by experimentally predicted DNA from S. aureus UDP-N-acetylmuramate-alanine ligase of the invention. information to aid the discovery of therapeutic molecules to treat disorders associated with a particular pathogenic species. As such, they are useful for inducing an immunological response in an individual and as an antigen for vaccination purposes. The polypeptides are also useful for species This invention relates to the structural and functional characterisation of microbial polypeptides from Staphylococcus aureus (S. aureus), Streptococcus pneumoniae (S. pneumoniae) and Escherichia coli (E. coli) that provide novel antimicrobial targets. Specifically, it refers to polypeptides that are involved in membrane biosynthesis, which play a critical role in the life cycle and viability of their pathogenic species of origin, and hence provide valuable drug targets. Furthermore, the invention describes modified version of these proteins that facilitate characterisation by labelling with isotopic or heavy atoms, and also thus microbial species of fusion proteins.

Novel crystallized recombinant polypeptides from Staphylococcus aureus, Streptococcus pneumoniae and Escherichia coli and which are involved in

This invention relates to the structural and functional characterisation of microbial polypeptides from Staphylococcus aureus (S. aureus), Streptococcus pneumoniae (S. pneumoniae) and Escherichia coli (E. coli) that provide novel antimicrobial targets. Specifically, it refers to polypeptides that are involved in membrane biosynthesis, which play a critical role in the life cycle and viability of their pathogenic species of origin, and hence provide valuable drug targets. Furthermore, the invention describes modified version of these proteins that facilitate characterisation by labelling with isotopic or heavy atoms, and also funion proteins. These proteins provide structural and functional information to aid the discovery of therapeutic molecules to treat disconders associated with a particular pathogenic species. As such, they are useful for inducing an immunological response in an individual and as an antigen for vaccination purposes. The polypeptides are also useful for developing antimicrobial agents for use as surface disinfectants, personal hygiene applications and as food preservatives or in treating food products to eliminate potential pathogens. This polypeptide sequence is the MurC protein encoded by DNA predicted from the genomic sequence S. aureus UDP-N-acetylmuranate-alanine ligase of the invention. membrane biosynthesis, useful as targets for pathogenic bacteria Claim 20; SEQ ID NO 28; 325pp; English

acreening New antisense nucleic acids, useful for identifying proteins or s for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs.

Claim 25; SEQ ID NO 43780; 1766pp; English.

the nucleic acid inhibits proliferation of a cell. Also included are:

the 6213 antisense sequences given in the specification where expression

of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid

encoding a polypeptide whose expression is inhibited by the antisense

muleic acid; (2) a host cell containing the vector; (3) an isolated

conflicted or its fragment whose expression is inhibited by the

antisense nucleic acid; (4) an antibody capable of specifically binding

the polypeptide or its fragment whose expression is inhibited by the

conflicteration or the activity of a gene in an operon required for

proliferation or the activity of a gene in an operon required for

the gene product or that has an activity against a biological pathway

conflicted for proliferation, or that inhibits cellular proliferation; (8)

dentifying a gene required for cellular proliferation or the biological

pathway in which a proliferation-required gene or its gene product lies

cor a gene on which the test compound that inhibits proliferation of an

organism acts; (9) manufacturing an antibiotic; (10) profiling a

compound; a activity; (11) a culture comprising strains in which the gene

product is overexpressed or underexpressed; (12) determining the extent

compounds; or (13) identifying the target of a compound that inhibits the

conflicted of the strains is present in a culture or collection of

strains; or (13) identifying the target of a compound that inhibits the

conflicted or of an organism. The antisense nucleic acids are useful for

dentifying proteins or screening for homologous nucleic acids required

conflicted to the strains of the strains in a condident or an underexpiration or the solate enabledence moleic acids required

conditional proliferation of solate condidents for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression ftp.wipo.int/pub/published_pct_sequences

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes theore their use in the discovery of novel antibiotics, the essential genes the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebbiela pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins con the used to screen compounds in rational drug discovery programmes. The antisense mucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The presents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in the way intropublished_pct_sequences.

The present sequence represents a UDP-N-acetylmuramate:L-alanine ligase

(Murc polypeptide) encoded by the S. aureus Murc gene. Host cells

containing an expression system comprising the Murc gene can be used for

the recombinant production of the polypeptide. Agonists or the Murc

copyleptide are used to treat conditions requiring increased activity or

expression of the polypeptide. Antagonists, inhibitory nucleic acid or

competitive polypeptide are useful for inhibiting the polypeptide e.g.

Competitive polypeptide are useful for inhibiting the polypeptide e.g.

Competitive polypeptide are useful for inhibiting they are also useful against

Competitial agents are useful to treat in-dwelling devices for

infection prevention or generally as wound treatments to prevent adhesion

of bacteria to matrix proteins. The Murc polypeptide is also useful for

diagnosing or prognosing a (susceptibility to) disease, for raising

contibodies; to identify modulators or specific receptors; in rational

drug design and as an immunogen for vaccines. The Murc gene sequences are

consetul in antisense/ribozyme therapeutics; to detect mutant Murc gene;

contibodies are immunogen for vaccines. The Murc gene sequences

contibodies are immunogen for vaccines. The Murc gene sequences are

contibodies are immunogen for vaccines. The Murc gene sequences are

contibodies are immunogen for vaccines and for genetic immunications.

ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960. The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections,
                                                                                                                                                240

WPI; 2003-029926/02 N-PSDB; ACA47124 antisense nucleic acids, useful for identifying proteins or screening required for cellular proliferation to isolate candidate molecules for rational drug discovery programs homologous nucleic acids

Claim 25; SEQ ID NO 71178; 1766pp; English.

The invention relates to an isolated muteric actu compitating any one of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway or the proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an corganism acts; (9) manufacturing an antibiotic; (10) profiling a compound activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibite the proliferation of an organism. The antisense nucleic acids required for cellular proliferations or screening for homologous nucleic acids required for electron or for correspondent and determined acids are useful for for electron or for a compound acids are useful for for electron or for a conditional acids are useful for for electron or an organism. The antisense mucleic acids required for electron or an organism to solate candidate molecules for acquired acids are useful for an account of the strains or screening for homologous nucleic acids required for a solate account of an organism to solate candidate molecules or screening for accou drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the brained from int/pub/published_pct_sequences invention relates to an isolated nucleic acid comprising any one of

New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.

claim 25; SEQ ID NO 46331; 1766pp; English.

the 6213 antisense sequences given in the specification where expression of the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

Co (i) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated continued acid; (2) a host cell containing the vector; (3) an isolated continued continued in antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway in which a proliferation or that inhibits cellular proliferation of the pathway in which a proliferation for cellular proliferation of the product lies or a gene on which the test compound that inhibits proliferation of an compound's activity, (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound's activity, (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required in a cidentifying acids required for homologous nucleic acids required for identifying the target of a compound that inhibits the contains. invention relates to an isolated nucleic acid comprising any one of

The invention fracters to an interest actu compilating any one of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a promoter operably linked to the nucleic acid encoding a promoter operably linked to the nucleic acid encoding a propose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated or polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular or the activity of a gene in an operon required for proliferation or that activity of a gene in an operon required for the gene product or that has an activity against a biological pathway or the appropriate for cellular proliferation or the biological pathway or a gene or which the test compound that inhibite proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound activity; (11) a culture comprising strains in which the gene compound that inhibite proliferation of an organism. The antisense uncleic acids are useful for the which each of the strains is present in a culture or collection of an organism. The antisense nucleic acids are useful for deach all manufacturing or homologous nucleic acids required for encounted acids are useful for deach all and acceptance or the strains or the strains or the strains or the strains of the strains or servening for homologous nucleic acids required for deach all and acceptance or the strains of the strains or the strain
                                                                                                                                                                                                                    New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  64 VIQGNAFASSHEBIVRAHQLKLDVVSYNDFLGQIIDQYTSVAVTGAHGKTSTTGLLSHVM 123

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of movel antibiotics, the essential genes them the discovery of movel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, conserly for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The present cands sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in celectronic format directly from WIPO at the printed sequences.

New antisense nucleic acids, useful for identifying proteins or s for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs. New antisense nucleic acids, for homologous nucleic acids

Claim 25; SEQ ID NO 57651; 1766pp; English.

the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid
confine and inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid
concling a polypeptide whose expression is inhibited by the antisense
nucleic acid; (2) a host cell containing the vector; (3) an isolated
contisense nucleic acid; (4) an antibody capable of specifically binding
the polypeptide of its fragment whose expression is inhibited by the
antisense nucleic acid; (4) an antibody capable of specifically binding
the polypeptide (5) producing the polypeptide; (6) inhibiting cellular
contisense nucleic acid; (4) an antibody capable of specifically binding
the polypeptide (5) producing the polypeptide; (6) inhibiting cellular
controliferation, (7) identifying a compound that influences the activity of
the gene product or that has an activity against a biological pathway
controliferation, (7) identifying a compound that inhibits proliferation of an
configuration agene required for cellular proliferation of an
configuration agene required for cellular proliferation of an
configuration and proliferation—required gene or its gene product lies
or or a gene on which the test compound that inhibits proliferation of
compound's activity; (1) a culture comprising strains in which the gene
confount is overexpressed or undersexpressed; (12) determining the extent
compound's activity; (1) a culture compound that inhibits the
compound that inhibits for
compounds or strains is present in a culture or collection of
strains; or (13) identifying the target of a compound that inhibits the
configuration of an organism. The autisense nucleic acids required
configuration of an organism. The acid model of acid or actional ac drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at The invention relates to an isolated nucleic acid comprising any one of tp.wipo.int/pub/published_pct_sequences

Genomic sequence for Listeria monocytogenes, useful e.g. for treatment and prevention of Listeria and related bacterial infections, and related polypeptides.

Claim 6; SEQ ID NO 1467; 192pp; French.

The present invention relates to the genome sequence of Listeria monocytogenes EGD-e (see ABA03041). The genome sequence and fragments of it are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and for studying genetic polymorphisms and other genomes. The present sequence is a protein encoded by the genome sequence of the present invention. Proteins expressed from the genome sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. The genome sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, the genome sequence and proteins for the treatment or prevention of infections by L. monocytogenes and related organisms. Note: The sequence data for this patent did not form part of the printed specification, but was obtained the characteristic formed directive formed formed formed for the formed formed formed formed formed for formed ftp.wipo.int/pub/published_pct_sequences

Patent No. 6159469

GENERAL INFORMATION:
APPLICANT: Choi et. al.
TITLE OF INVENTION: Streptococcus pneumoniae Antigens and Vaccines NUMBER OF SEQUENCES: 452
CORRESPONDENCE ADDRESS:
ADDRESSES: Human Genome Sciences, Inc.
STREET: 9410 Key West Avenue
CITY: Rockville
STATE: Maryland
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

APPLICANT: Gary L. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO MORAXELLA CATAFITLE OF INVENTION: POR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.2005-001
CURRENT APPLICATION NUMBER: US/09/540,236
                                                                                                                                                                                                  Sequence 4942, Application US/09328352
Patent No. 6562958
GENERAL INFORMATION:
PAPLICANT: GATY I. Breton et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/08/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF SEQ ID NOS: 8252
LENGTH: 475
